NOTE

1. Ripple/Noise measured with a 0.1uF ceramic capacitor.
2. Tested by nominal Vin and constant resistive load.
3. Tested by normal Vin and 25% load step change (75%-50%-25% of Io).
4. Input reflected ripple current is measured through a source inductor L1(12µH) and a source capacitor C1(10µF) at nominal input and full load.
5. "Nature Convection" is usually about 30-65 LFM but it's not equal to still air (0 LFM).
6. The SNR-2.0 series can meet EN55032 Class B with an external filter in parallel with the input pins.
7. An external filter capacitor and TVS is required if the module has to meet IEC61000-4-4 and IEC61000-4-5.
8. Do NOT operate converters exceeding the absolute maximum rating, over rating will cause damage to converters.
9. Operation under no-load conditions will not damage these devices, however they may not meet all listed specifications.

TEST CONFIGURATIONS

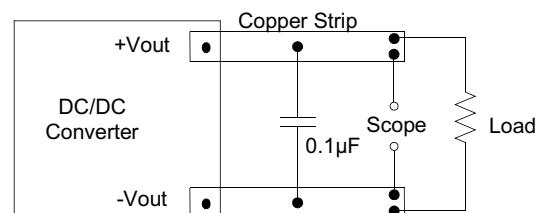

Input Reflected Ripple Current Test Step

Input reflected ripple current is measured through a source inductor L_{in} (12 μ H) and a source capacitor C_{in} (10 μ F, ESR<1.0 Ω at 100kHz) at nominal input and full load.

Output Ripple & Noise Measurement Test

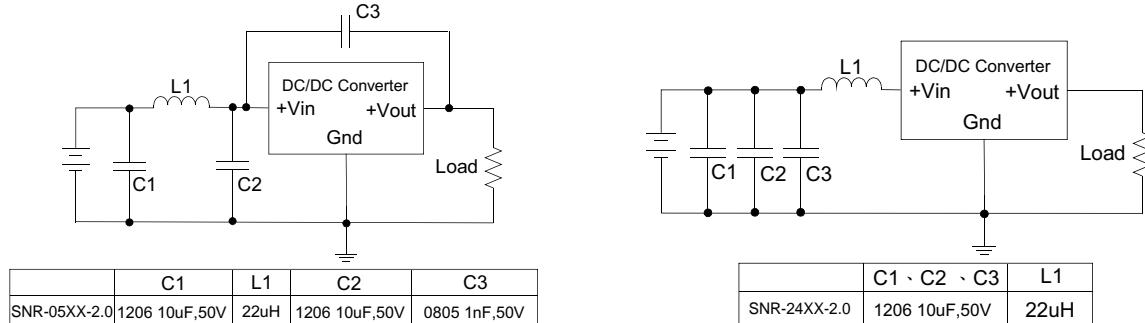

Measure with a 0.1 μ F ceramic capacitor. The Scope measurement bandwidth is 0-20MHz.

EMC COUNTERMEASURES

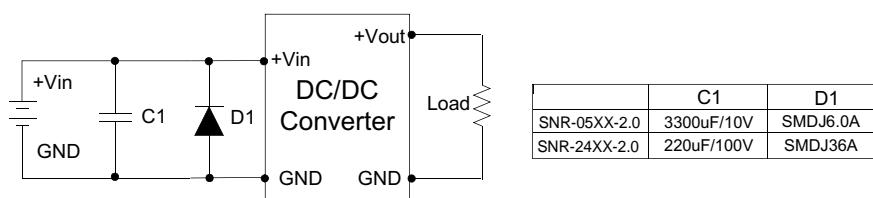

EMI Countermeasures

Input filter components (C1, C2, C3, L1) are used to help meet EMI requirement for the module. These components should be mounted as close as possible to the module; and all leads should be minimized to decrease radiated noise.

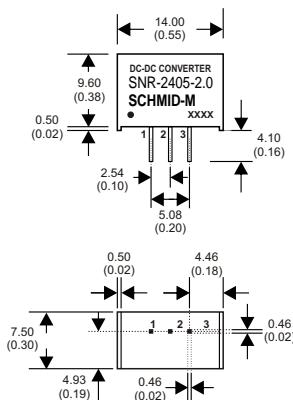

EFT & Surge Test Countermeasures

The filter SCHMID-M suggest: 05 Vin models : Nippon - chemi - con KY series , 3300uF/10V and a TVS , 3KW , 6.0V
24 Vin models : Nippon - chemi - con KY series , 220uF/100V and a TVS , 3KW , 36V
